CPAT Network, Inc

CPR/ AED Public Awareness and Training Network, Inc. was created by a group of current

and former paramedics from the Philadelphia Fire department

in 2005.

We provide CPR, first aid and defibrillator programs to various organizations and programs throughout Philadelphia and the surrounding areas. We provide **American Heart Associations trainings and certifications** for the following at your location if needed.

- ◆ Health Staffing Companies
- ◆ Churches/ Recreations Centers
- ◆ Daycares/Schools/Camps
- ◆ Doctor offices/ Corporate Businesses/Hotels/Health Fitness
- ◆ Health Clinics

Why is CPR training needed ?

Here in the United States a life is lost every 34 seconds due to heart attacks and accidents.

Statistics shows when immediate CPR(cardiopulmonary resuscitation) is given the chance of survival is much greater.

According to the **American Heart Association** the lives of adults and children numbering in the tens of thousands could be saved each year, if CPR was performed immediately. Having a defibrillator onsite readily available in the event of cardiac arrest can double a persons chance of survival sudden cardiac arrest.

Some of the common causes of sudden death includes heart attacks, electric shock, drowning, severe allergic reaction, choking, drug overdose, and suffocation.

5 percent of all cardiac arrest occur at the workplace. 13 percent of all work place fatalities are caused by sudden cardiac arrest.

Training and recertification of CPR is a major requirement and **mandatory** for all healthcare workers and childcare provider's.

Our Mission

Our organization is a non-profit 501(C) 3. Serving Philadelphia and all surrounding areas.

Our mission is to save lives by providing life saving instruction to youth, adolescents, and adults in CPR, First Aid and the correct use of an AED (Automatic External Defibrillator), we will help to increase the cardiac survival rate and improve the health and welfare of the community.

Our goal is to have every public establishment equipped with AED's and individuals prepared to provide CPR to those in cardiac arrest.
